

## Kappa Paring Knife 4"

sku: 0701/09

*This paring Knife is primarily made for larding meat, as the tip allows accurate and precise cuts. At the same time, this knife can also be used to decoratively cut fruit and vegetables. Larding and garnishing knives can confidently be described as small all-purpose knives, for fine cutting work such as peeling onions or apples. All Gude knives of the Kappa series are made of a single piece of chrome-vanadium-molybdenum knife steel. This steel is hand-forged. Each individual knife is manufactured in over 30 manual steps. The knives are ice-hardened after forging, which gives the steel an extreme strength and thus a higher cutting durability. The one-piece all-metal construction offers also a unique weight balance. The Gude Kappa series includes numerous of knives. From a peeling knife with a blade length of 2.5 inch to a salmon knife with a blade length of 12.5 inch, this knife series offers the appropriate knife for every purpose. Although all knives of the Kappa series are dishwasher safe due to their solid metal, we recommend manual cleaning. The salts of the dishwasher detergents damage the blade in long term. Further the blade can get into contact with other dishes or cutlery. Handcrafted in Solingen, Germany*

*Blade length: 4 or 5 inch*

*Made of one piece of stainless chrome-vanadium-molybdenum knife steel*

*Hand-forged, ice-hardened and sharpened by hand*
